SITUATION SUMMARY

Hazardous Materials Release Spill 15-4277, Loon Beach Santa Barbara County (New/Final)

- On 7/26/15 at 0958 hours, the California State Warning Center was contacted by a private citizen reporting an unknown amount of oil covering Loon Point Beach in the city of Summerland in Santa Barbara County. The caller stated it was not there yesterday and is now covering approximately one mile of coast line. The substance has a strong oil odor and is a brown/black color. The caller stated the substance could be seen in the waves and on the beach itself. At 1341 hours the USCG reported that the USCG pollution duty officer responded to the area and concluded this was a heavy natural seepage incident. The USCG pollution duty officer advised there were no tar balls, tar patties or tar present on the beach and no samples were taken. A warden from the California Fish and Wildlife advises that after walking the entire beach a sheen was observed on the sand above the high water mark with no smell of oil to the sand. Per California Fish and Wildlife there was no affected wildlife in the area, no media interest in the area and no public interest from the public at the beach advising of the oil sheen. Per California Fish and Wildlife this area is a natural seepage site on and offshore. There is no ICP set up for this incident the only ICP is the Refugio ICP some 40 miles away. California Fish and Wildlife has cleared the scene unable to locate the reported oil release on the beach

Cal EOC Incident – 2014 Drought

- SOC / Inland REOC remains activated in support of 2014 Drought

Weather of Concern

- Fire Weather Watch in effect from late tonight through Wednesday morning for areas in Siskiyou County

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:

Eureka Weather:

A passing shortwave could produce a few showers or thunderstorms over the Siskiyou Mountains and Trinity Alps this afternoon and evening. Strong ridging will develop next week which will prolong dry weather and generate hot temperatures for inland areas. Coastal areas should remain slightly warmer than normal with decreasing clouds through the week.

Medford Weather:

An upper level ridge of high pressure will build today and persist through the weekend. A strong surface thermal trough will develop near the coast tonight. This strong thermal trough will persist through Wednesday morning. Very hot conditions will develop Wednesday and will persist into the weekend.

Reno Weather:

Temperatures will remain seasonably mild and pleasant today. Dry conditions continue as high pressure builds through midweek. High temperatures will reach into the upper 90s and near triple digits by Thursday. Moisture will also be on the increase with a chance of thunderstorms by next weekend.

San Francisco Weather:

A significant warm-up is forecast for inland areas over the next few days and more modest temperature increases closer to the coast as strong high pressure builds in aloft and onshore flow weakens considerably. Subtropical moisture may move in from the south starting by Thursday.

WEATHER

WEATHER SYNOPSIS BY REGION:

CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY:

Sacramento Weather:

Dry weather continues this week with temperatures returning to well above average as high pressure strengthens. Increasing monsoon moisture may lead to an increasing chance of mountain thunderstorms by the weekend.

Hanford Weather:

Clear skies and near normal temperatures continue today. Significantly warmer conditions are expected through the end of the week as high pressure builds. Tropical moisture will bring increased cloud cover and a chance for mountain and desert thunderstorms for the latter half of the week.

SOUTHERN CALIFORNIA:

Los Angeles Weather:

Low clouds are expected through Tuesday morning. High pressure will begin building Tuesday along with a warming trend that will peak by Thursday. Monsoon moisture also returns mid-week through the weekend with a slight chance of showers south of Point Conception.

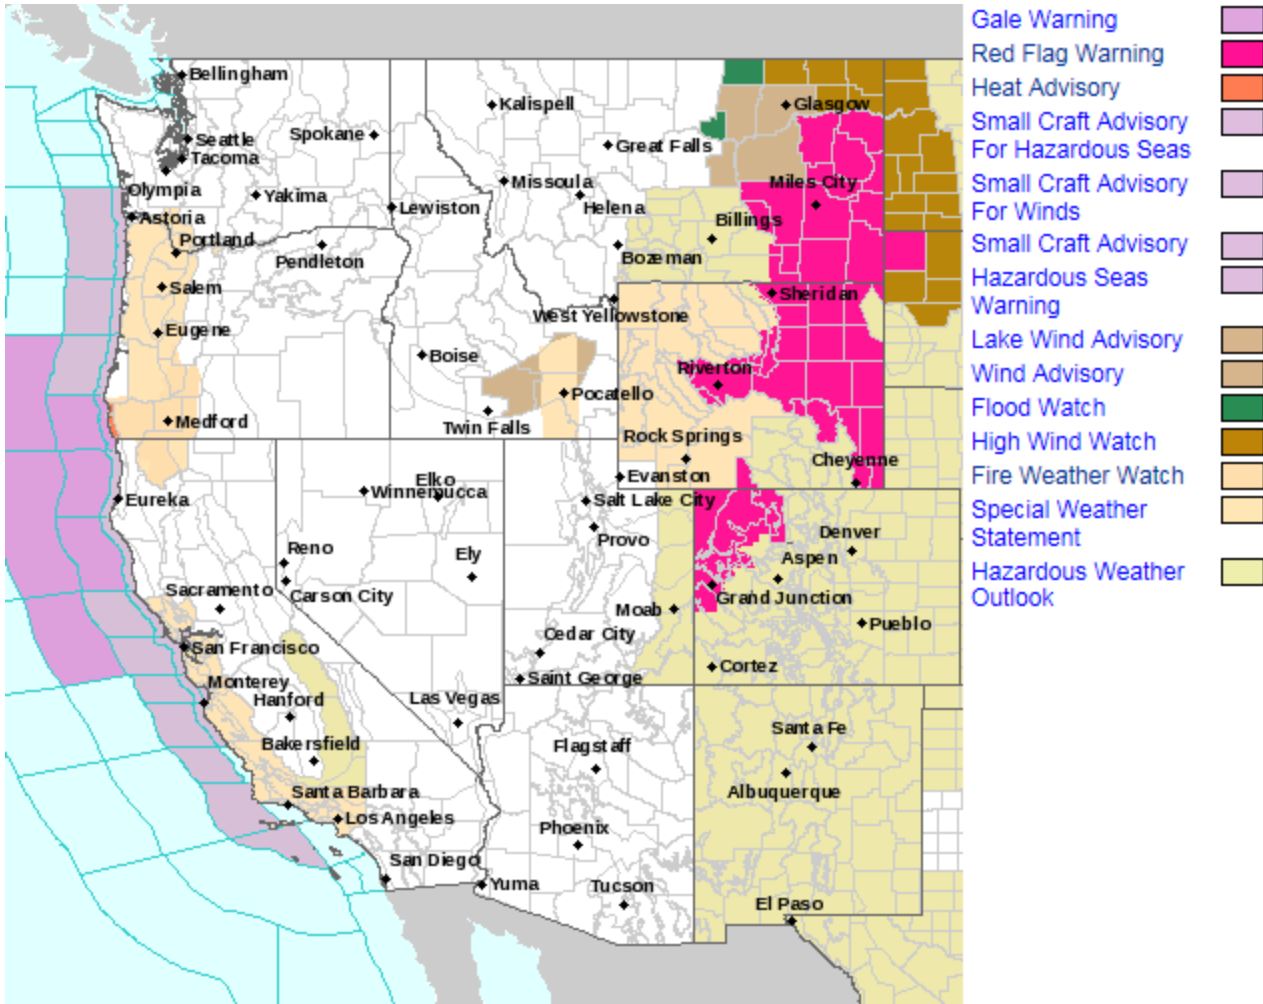

Extreme Southwestern California including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:

A trough of low pressure moving inland along the west coast will bring slightly cooler high temperatures today locally gusty west winds in the mountains and deserts for late this afternoon through late this evening with areas of night and morning low clouds and fog extending into the western valleys.

Southeast California Weather:

Dry westerly flow aloft will keep showers and thunderstorm chances near-zero through today. Increasing southerly flow aloft will then gradually increase moisture levels and thunderstorm chances from Tuesday onward through Thursday. High pressure building will then reduce storm chances somewhat through the remainder of the week and into the weekend.
